NWOKO PETERSON CHIKA

Nigeria | | petersonwoko@gmail.com | LinkedIn | GitHub

SENIOR DEVOPS ENGINEER

Results-oriented professional with 8+ years of experience in designing, implementing, and optimizing end-to-end CI/CD pipelines for complex software applications. Expert in automating deployment processes, managing infrastructure as code, and ensuring seamless integration between development and operations teams. Track record of successfully migrating on-premises applications to cloud. Proven success in fostering collaboration and communication across cross-functional teams to drive continuous improvement in software delivery. Possess strong troubleshooting and problem-solving skills coupled with commitment to maintaining high system availability and performance. Recognized for streamlining workflows, reducing deployment times, and enhancing overall system reliability. Known for staying current with emerging technologies and industry best practices.

Areas of Expertise

- *DevOps Automation*
- *Infrastructure as Code*
- *Software Development Life Cycle*
- *Cloud Platforms*
- *Scripting & Programming*
- *Security Best Practices*
- *Database Management*
- *Network Configuration & Optimization*
- *Agile & Scrum Methodologies*
- *CI/CD*
- *Technical Leadership*
- *Disaster Recovery Planning*

Professional Experience

Wolters Kluwer (October 2024 – Present)

- Lead design, implementation, and operational management of cloud-native workloads across AWS and Azure environments.
- Own Kubernetes platform reliability, primarily focused on Amazon EKS, ensuring high availability, performance optimisation, and workload resilience.
- Architect and maintain CI/CD pipelines using Azure DevOps and YAML-based workflows, improving deployment consistency and reducing release risks.
- Drive infrastructure standardisation through Infrastructure as Code (IaC) practices, improving reproducibility and minimising configuration drift.
- Collaborate with cross-functional engineering teams to improve system scalability, fault tolerance, and release automation strategies.
- Proactively identify cloud cost optimisation opportunities by analysing resource utilization patterns and rightsizing compute/storage services.
- Provide senior-level incident response and root cause analysis (RCA), reducing recurring operational failures.
- Mentor engineers on cloud architecture principles, Kubernetes best practices, and deployment reliability strategies.

The F Word (June 2024 – Sept 2025)*

- Implemented CI/CD pipelines to automate application delivery, managed servers with Terraform for performance and reliability, and enforced IAM/RBAC policies for secure access. Configured domains and CDNs to enhance scalability, deployed scalableApp Services, and integrated GitHub Actions to streamline workflows.
- CI/CD Pipeline Setup: Automated build, test, and deployment processes using CI/CD pipelines for seamless application delivery.
- Server Management: Configured and optimized servers with IaC tools like Terraform for performance and reliability.
- IAM and RBAC Implementation: Secured systems by enforcing IAM and RBAC policies, ensuring least privilege access.
- Domain and CDN Configuration: Enhanced web application performance and scalability via domain setup and CDN integration.
- App Services Deployment: Deployed and supported scalable, high availability applications with integrated monitoring.
- GitHub Actions Automation: Made workflows with GitHub Actions for linting, testing, and deployment automation.

Coendel, Cadana*(May 2022 - June 2024)*

Senior DevOps Engineer

Design Terraform modules to facilitate seamless utilization of resources across both Azure and AWS, along with optimizing the overall resource management process. Construct reference architecture outlining approved implementations by using Terraform to ensure standardized and scalable approach to infrastructure development in Azure. Manage AKS cluster running GitLab using Helm charts to increase stability and reliability of continuous integration and deployment environment. Create new Helm charts for applications to expand scope of applications and streamline integration processes.

- Offered comprehensive overview of cost savings achieved through automation in maintenance processes by engineering cost saving reporting lambda using Python 3.87, DynamoDB, and Terraform.
- Maximized efficiency in roll out of new Azure infrastructure by conceptualizing Gitlab CI/CD pipeline in collaboration with security guidelines.
- Executed Config as Code methodology through combination of GitHub Enterprise, GitHub Actions, and Artifactory, leading to improved version control and traceability of infrastructure changes.
- Devised Ansible playbook to automate azure infrastructure provisioning integrating service now components for self service option.
- Implemented AWS Cognito to manage user authentication and authorization for multiple web and mobile applications.
- Designed and configured Cognito User Pools and Identity Pools to streamline user management and secure API access.
- Integrated AWS Cognito with other AWS services such as API Gateway, Lambda, and DynamoDB to create a seamless and secure user experience.

- Set up monitoring and alerting for Cognito using AWS CloudWatch to ensure high availability and performance.
- Troubleshot and resolved authentication and authorization issues, providing timely support to development teams and endusers.
- Configured BigQuery instance for ODI data ingestion on GCP, optimizing performance and scalability by implementing partitioning strategies, resulting in a 30% reduction in query response time.
- Engineered and implemented comprehensive backup and recovery strategy with automated failover mechanisms, ensuring data availability of 99.9% uptime.
- Played a pivotal role in client negotiations by conducting technical demos and providing hands-on training sessions to nontechnical stakeholders, resulting in a 20% increase in client satisfaction ratings.

Galt Consulting – HOUSTON, TX (August 2023-March 2024)

Senior DevOps Engineer

Streamlined beta application testing by constructing multiple Docker containers to facilitate accelerated and thorough testing processes. Utilized Terraform for deploying resources to both Vmware Esxi and KVM bare metal environments for consistent and reliable infrastructure provisioning. Conducted audit of existing Kubernetes worker counts to identify opportunities for cost savings. Piloted ElasticStack monitoring for Kubernetes environment to establish baseline for future monitoring initiatives.

- Orchestrated seamless migration of virtual machines to Azure VMSS, resulting in a 50% increase in system reliability and performance for critical business applications.
- Utilized Azure DevOps to automate deployment processes, reducing deployment times by 40% and enhancing code quality standards.
- Developed and implemented innovative Python scripts for system automation tasks, leading to a 25% improvement in operational efficiency.
- Built HTTPS ingress controller and TLS certificate on AKS to enable configurable traffic routing for individual Kubernetes services, resulting in effective security and traffic management.
- Automated creation process of AMI, VMware, and KVM Images for Department of Veterans Affairs' Veteran HealthCare Initiative by designing robust CICD pipeline using Packer & Jenkins.
- Contributed to shift towards infrastructure as code by developing numerous Terraform templates to foster more scalable and maintainable infrastructure.

Talentplus (November 2021- May 2023)

DevOps Engineer

Ensured stability of core business critical systems and maintained optimal performance of cloud infrastructure. Headed project to enhance efficiency and streamline operations by automating provisioning process through Packer, Terraform, and Jenkins. Executed creation of Docker files for image building while emphasizing hands-on experience in image creation process. Managed Docker private registry to increase accessibility and security of containerized applications. Utilized Ansible and Chef for configuration management, including authoring Playbooks and Cookbooks to orchestrate system configurations.

- Formulated disaster recovery strategy while bridging on-premises VMware environment with AWS to assure business continuity.
- Exhibited high level of proficiency in GIT to contribute to effective version control and collaborative development.
- Utilized Ansible to manage infra-automation tasks and contribute to operational efficiency.
- Automated the deployment process on Azure by implementing Azure DevOps and Terraform, resulting in a 40% reduction in deployment time and increasing deployment consistency.
- Configured monitoring and logging systems using Filebeats and the ELK stack, leading to a 30% improvement in identifying application performance issues proactively.
- Enhanced cloud infrastructure security by implementing IAM policies and network security groups, ensuring compliance with best practices and reducing potential security threats.
- Implemented containerization of applications with Docker to promote efficient resource utilization and deployment consistency.

Neutrolabs (August 2019- November 2021)

DevOps Engineer

Led end-to-end application of industry best practices for CI/CD and infrastructure management within PCI and GDPR environments to streamline workflows and raise security compliance. Architected and refined production management software, process automation, and configuration management. Planned release schedules in alignment with project milestones and coordinated closely with integration/functional team during SIT and UAT phases to address environment-related issues. Automated mass updates and configuration changes by interfacing with REST API using Postman/Ruby, resulting in reduced manual intervention and increased operational effectiveness. Administered daily builds and releases to QA, Pre-Prod, and Production environments while maintaining rigorous schedule to meet project timelines and guarantee timely delivery of software updates.

- Provisioned and managed streaming data for the company using Amazon MSK, improving data processing efficiency by 40%.
- Utilized Amazon Web Services (AWS) to host and scale microservices architecture through elastic beanstalk, leading to a 20% increase in system uptime.
- Implemented Docker and container orchestration tools like docker swarm and k8s to streamline deployment processes, resulting in a 30% reduction in deployment time.
- Utilized Amazon Web Services (AWS) to streamline the hosting and deployment of codebase on Github and Bitbucket, resulting in a 50% reduction in deployment time and a 40% increase in system uptime.
- Led the implementation of Blue/Green Deployment strategy in Kubernetes, reducing downtime by 60% during updates and patches while increasing overall system reliability by 20%.
- Automated the provisioning of infrastructure on AWS services such as EC2, VPC, EFS, S3, and Route53, leading to a 30% decrease in operational costs and a 25% improvement in scalability

Education & Certifications

University Of Lagos Akoka, Lagos

Graduation Date: Jan 2025

Bachelor of science Geography

Certified Amazon Web Services Cloud Practitioner: Link
Microsoft Certified Azure Fundamentals (AZ-900): Link
Microsoft Certified Data Fundamentals (DP-900): Link
Kubernetes and Cloud Native Associate (KCNA): Link
Hashicorp Certified Terraform Associate (003): Link

Technical Skills

Technology Tools: Amazon Web Services, Azure, GCP
Monitoring: Dynatrace
Configuration Management: Ansible
Continuous Integration: Jenkins, Azure DevOps, Gitlab
Source Control: Git
Virtual Environment: VMware, Hyper-V
Container Technology: Docker, Kubernetes, KVM
Operating Systems: Linux & Windows
Continuous Provisioning: Terraform, Packer
Web Servers: Apache, Nginx, Express JS
